EDUCATION

Saigon Technology University - STU **2022 - Present**

Bachelor of Information Technology || GPA: 3.12/4.0

- **Awards:** 3rd Prize – Student Research Contest, STU (2025) | 3rd Prize – STU Startup & Innovation Contest (2024)

CERTIFICATIONS

Fullstack Software Development Certification – YoEdu Academy	**2026**
Git Work-Ready: Production Source Code Management – Rikkei Education	**2026**
Enterprise Website Deployment– Rikkei Education	**2026**

WORK EXPERIENCE

Công ty Cổ phần Công nghệ và Đào tạo YOOT **March 2026 - August 2026**

YoEdu - Student Management System (SMS) - Backend Developer Intern

- **Architected and developed a comprehensive student management backend** using Java and Spring Boot, covering academic and administrative workflows across **18 domain entities**, including students, parents, teachers, courses, classes, enrollments, attendance, learning results, tuition invoices, payments, promotions, schedules, rooms, notifications, and user management.
- **Engineered a scalable REST API ecosystem** with **17 controllers and 96 HTTP endpoint mappings**, following a strict layered architecture across Controller, Service, Repository, Entity, and DTO layers to ensure modularity, maintainability, and separation of concerns.
- **Designed and implemented complex relational data models** with Spring Data JPA/Hibernate, handling entity relationships and business workflows across academic, attendance, enrollment, scheduling, and financial domains; optimized data access through pagination, dynamic filtering, JPQL, and native SQL queries.
- **Implemented enterprise-style authentication and authorization** using Spring Security and JWT, including BCrypt-based password encoding, stateless request authentication, role-based access control (RBAC), protected resources with method-level authorization, and refresh-token session management with token rotation and revocation.
- **Built centralized API reliability mechanisms** including DTO-based request/response design, Bean Validation, standardized API responses, global exception handling, and OpenAPI/Swagger documentation to improve API consistency and developer usability.
- **Engineered academic and financial business workflows** covering course enrollment, attendance tracking, learning-result management, tuition billing, payment records, promotion/discount handling, scheduling, parent-facing data access, and reporting.
- **Established an automated backend testing suite** containing **16 test classes and 86 JUnit test methods**, using JUnit 5 and Mockito to validate core service-layer business logic, repository interactions, validation scenarios, and exception handling.
- **Managed database schema evolution with Flyway**, maintaining version-controlled migrations for schema creation, demo data, refresh-token sessions, notification changes, and subsequent database structure fixes across development and production configurations.

PROJECTS

English Vocabulary Learning System – Spaced Repetition System (SRS & AI-Assisted) **2026 - Present**

Fullstack Developer | https://project-fullstack-lela-fe.onrender.com | https://github.com/Tr-Duy/ProJect-Fullstack-LeLa

- **Architected and shipped an AI-driven, high-throughput educational platform** from initial prototype to production deployment, driving end-to-end full-stack architecture, distributed execution engines, and client-facing interfaces.
- **Engineered a scalable backend ecosystem** leveraging Java, Spring Boot, Spring Data JPA, and MySQL across 34+ domain entities, designing and maintaining **170+ high-performance REST API endpoints** under strict layered architecture.
- **Architected a modern, responsive single-page application (SPA)** using ReactJS, Vite, and Tailwind CSS / Ant Design; streamlined client-side data fetching, state caching, and optimistic UI updates via TanStack Query.
- **Designed and deployed resilient core engines**, including a custom Spaced Repetition System (SRS) algorithm, real-time WebSocket communication pipelines, dynamic leaderboard calculation, and automated subscription workflows.
- **Integrated multi-provider external ecosystems**, embedding Google Gemini AI for adaptive content synthesis and SePay for seamless payment processing and transaction verification.
- **Implemented enterprise-grade security protocols**, utilizing Spring Security with JWT, OAuth2 multi-provider authentication, role-based access control (RBAC), and stateless refresh-token rotation across both client and server layers.
- **Enforced enterprise system reliability, code audit standards, and data integrity** by engineering a full-suite testing pipeline with **65 test classes and 295+ JUnit unit/integration tests** to ensure seamless CI/CD deployment.

SKILLS

Languages:	Java, TypeScript, SQL
Backend:	Spring Boot, Spring Web, Spring Data JPA, Hibernate, RESTful API, Maven
Frontend:	ReactJS, Vite, React Router, Tailwind CSS, Ant Design, TanStack Query
Database:	MySQL, PostgreSQL, SQL Server, Flyway
Security & Integration:	Spring Security, JWT, OAuth2, Google Gemini API, SePay, WebSocket
Testing & Tools:	JUnit 5, Mockito, Postman, Swagger/OpenAPI, Git, GitHub, Docker, Docker Compose
